Contents

<i>Preface</i>	xx
Part I HTML/XHTML for instant Web	1
1 From HTML to XHTML and Web site design	3
1.1 Introduction: a practical review of XHTML	3
1.1.1 Web requirements: a working browser	4
1.1.2 Web configurations: how the Web works	4
1.2 A quick start with Web pages	6
1.2.1 From HTML to XHTML	6
1.2.2 Adding fonts, colors, and background	8
1.2.3 A “Thank You!” page to Web visitors	11
1.3 Using images on XHTML	12
1.3.1 Adding images to our pages	12
1.3.2 Background images: edges and material effects	14
1.3.3 Animated images: cartoon animation	16
1.3.4 More animated images: a 3D animated logo	19
1.4 Hyperlinks, tables, and frames	21
1.4.1 Hyperlink to the Web world	21
1.4.2 XHTML tables and formatting	24
1.4.3 A simple photo album using tables	28
1.4.4 Frames: windows on Web pages?	30
1.4.5 A page to link all examples	32
1.4.6 Open an internal window with iframes	34
1.5 Publishing your page on the Internet and search engines	36
1.5.1 Connecting to Web servers	36
1.5.2 FTP uploading files	36
1.5.3 A simple page to publish live Webcam images	40
1.5.4 Putting your Web site into public search engines	42
2 Cascading Style Sheet (CSS) for Web pages	43
2.1 What is CSS style?	43
2.1.1 Inline style	43
2.1.2 The embedded style element <code><style></code>	44
2.1.3 External CSS style sheets	46
2.1.4 Designing Web logos with CSS	47
2.2 Controlling text properties with style	50
2.2.1 Font family, size, weight, and color	50
2.2.2 Alignment, indent, and margins	53
2.2.3 Letter decoration and transformation	54

2.2.4	Text box dimensions and spacing	56
2.3	Background and border	58
2.3.1	Background color and image	58
2.3.2	Positioning a background image	60
2.3.3	“Nailing” a background image	61
2.3.4	Color, width, and style of element borders	63
2.4	Dimensioning and positioning of elements	65
2.4.1	Width and height spacing	67
2.4.2	Element space padding	68
2.4.3	Left and top position	69
2.4.4	Positioning a group of elements	70
2.4.5	One element behind another	72
2.5	Other design techniques using the CSS style	75
2.5.1	Changing the cursor shape with CSS	75
2.5.2	Displaying XML pages with CSS	77
2.5.3	Generating a text background with scripts	78
3	Graphics, fonts, and colors using Java	80
3.1	Beginning Java programming	80
3.1.1	An introduction to Java and J2SDK	80
3.1.2	My first Java program	81
3.1.3	A Java program with basic language features	82
3.2	Controlling fonts and colors with Java applets	83
3.2.1	A simple Java applet	83
3.2.2	A Java applet to set font and color	85
3.2.3	Font rotation and translation	86
3.2.4	A page with random colors	88
3.2.5	Selecting color with <code>JColorChooser()</code>	89
3.3	Displaying graphics and shapes using Java	93
3.3.1	Lines, rectangles, and ovals on Web pages	93
3.3.2	Polylines and polygons using arrays	96
3.3.3	Arcs, chords, and pies with Java2D shapes	99
3.3.4	Controlling the applet coordinate system	101
3.3.5	Drawing general data on applet windows	104
3.4	Business graphics with Java applets	106
3.4.1	A Java function to display indices of stock exchanges	106
3.4.2	Automation and more interaction with Web pages	112
3.4.3	Displaying bar and pie charts	119
4	Images, animations, and multimedia	124
4.1	Using multimedia on the Web	124
4.1.1	An introduction to multimedia	124
4.1.2	Multimedia file formats on the Web	125
4.2	Basic multimedia applications on the Web	127
4.2.1	A simple page with sound and music	127
4.2.2	A simple page with video clips	128
4.2.3	Embedding video with the <code></code> element	129
4.2.4	Including objects with the <code><object></code> element	131

4.3	Embedding and controlling WMP	133
4.3.1	Identifying WMP with ActiveX controls	133
4.3.2	Embedding WMP	134
4.3.3	Creating control buttons for WMP	135
4.3.4	The Windows Media Video (WMV) format	138
4.4	Using plugins for multimedia applications	142
4.4.1	What are plugins?	142
4.4.2	The embed element <code><embed></code>	144
4.4.3	A page to play back movies using plugins	145
4.4.4	Cross-browser applications with plugins	148
4.5	Using the Java Media Framework (JMF) and Player	150
4.5.1	Installing and using JMF	150
4.5.2	Play back sound and movies using JMF	153
4.5.3	A page to select and play back movies	155
4.5.4	Select and play back movie with a select box	157
4.5.5	Broadcasting live video using JMF	158
5	XML and XSLT	161
5.1	An introduction to XML and XSLT	161
5.1.1	What is XML?	161
5.1.2	What is XSLT and how does it work?	162
5.1.3	The Document Type Definition (DTD) used in XML	164
5.1.4	The XML Schema Definition (XSD)	165
5.2	Transforming XML to XHTML using XSLT	166
5.2.1	Basic elements in XSLT	166
5.2.2	Simple XSLT for XML pages	168
5.2.3	Using templates in XSLT	171
5.3	Manipulating XML data with XSLT	174
5.3.1	Generating loops with XSLT	174
5.3.2	Sorting XML data with XSLT	175
5.3.3	Using XSLT filtering and query features	177
5.3.4	Using variables in XSLT	180
5.4	Using CSS and parser on XML documents	183
5.4.1	Using CSS on XML pages	183
5.4.2	Handling XML documents with parser	188
5.4.3	Accessing XML elements with parser	191
5.4.4	Navigating XML data using parser	194
	Part II Practical programming techniques for the Web I	199
6	Start with mouse-over control	201
6.1	Introduction: mouse events on the Web	201
6.1.1	Mouse events	201
6.1.2	DOM confusion	202

6.2	Beginning mouse over (or rollover)	203
6.2.1	My first mouse-over page	203
6.2.2	Mouse events supported by browsers and versions	205
6.2.3	A simple art gallery	206
6.2.4	Changing background color with mouse over	208
6.2.5	Creating background textures	210
6.3	Changing text attributes with mouse over	212
6.3.1	Highlighting text with a dynamic background color	212
6.3.2	Changing text sizes and fonts on the fly with the style object	213
6.3.3	CSS class name swapping	214
6.3.4	Output text with mouse over	216
6.3.5	A simple text message board	217
6.3.6	An image display board	221
6.4	Basic mouse clicks and position control	222
6.4.1	My first mouse click page	222
6.4.2	Buttons with style and a mouse click counter	223
6.4.3	Mouse positions	225
6.4.4	Moving text and images with a mouse	228
6.5	Generating menus with mouse over	230
6.5.1	Pull-down menu (window style) using XHTML	230
6.5.2	Generating sub-menus	232
7	Practical use of script	235
7.1	Web programming with scripts	235
7.1.1	Global programming via Internet browsers	235
7.1.2	ECMAScript and the standard	236
7.1.3	Some language features of ECMAScript	236
7.2	Basic boxes and controls	239
7.2.1	User alert and confirm boxes	239
7.2.2	Getting user input with prompt boxes	241
7.2.3	Page redirection and random redirection	242
7.2.4	Title and status bar animation	244
7.3	Detection	245
7.3.1	Browser detection	245
7.3.2	Browser, system, and network detection	246
7.3.3	Conditionals depending on browser	249
7.3.4	Page redirection depending on browser	251
7.3.5	International languages and detection	252
7.3.6	Controlling browser size and hostname with detection	254
7.4	Cookies, cookies	256
7.4.1	My first cookie	256
7.4.2	Counting and remembering last visit with cookies	258
7.4.3	Deleting some or all of your cookies	260
7.4.4	Practical use of cookie functions (cookie library)	262
7.4.5	Manipulating cookies with library functions	264
7.5	Implementation of an online shopping cart	267
7.5.1	Using XHTML as an interface	267
7.5.2	Constructing the program file	270
7.5.3	Improvements and modifications	272

8	Controlling frames and browser window(s)	276
8.1	Controlling frames I	276
8.1.1	A classic dynamic menu with swapping frames	276
8.1.2	Another approach to dynamic menu	278
8.1.3	A page that cannot be framed	281
8.1.4	Keeping frames in order	282
8.2	Controlling frames II	283
8.2.1	Creating a dynamic advertising strip with frames	283
8.2.2	Frame structure and access model	285
8.2.3	Sharing data and functions among frames	288
8.2.4	Sending information to frames interactively	290
8.2.5	Controlling iframes	293
8.3	Browser window(s) I	295
8.3.1	Opening single and multiple new window(s)	295
8.3.2	Using the basic attributes of new window(s)	296
8.3.3	Position and size of new window(s)	299
8.3.4	Random positioning of a series of pictures	299
8.3.5	Cycling show of a group of XHTML pages	302
8.4	Browser window(s) II	304
8.4.1	Locating page objects with window scrolling	304
8.4.2	Image transition using scrolling effects	306
8.4.3	Browser window interaction (an XHTML interpreter)	308
8.4.4	Last modified property and printing a page	310
9	Programming moving objects	313
9.1	An introduction to moving objects	313
9.1.1	Positioning objects with CSS style	313
9.1.2	Some moving texts	315
9.1.3	Screen depth and <i>z-index</i>	318
9.2	Controlling objects with event handlers	319
9.2.1	Basic event handlers	320
9.2.2	A page to capture and test various events	321
9.2.3	Some jumping characters	323
9.2.4	Selecting and driving objects with the mouse	326
9.3	Setting up general event handlers	330
9.3.1	Event models of browsers	330
9.3.2	A page to test event models	331
9.3.3	Setting up event handlers and listeners	333
9.4	Practical techniques for moving objects	334
9.4.1	Moving the Pacman	334
9.4.2	A shooting game	338
9.4.3	Dragging and dropping objects	344
9.5	Handling multiple moving objects	347
9.5.1	Generating multiple flying objects	347
9.5.2	Catching flying objects with the mouse	351
9.5.3	A game to catch the butterflies	354

Part III Practical programming techniques for the Web II	359
10 Using the Document Object Model (DOM) I	361
10.1 An introduction to the DOM	361
10.1.1 What is the DOM?	361
10.1.2 DOM differences and the standard	361
10.2 Controlling input elements with DOM interfaces	363
10.2.1 Generating text field, button, radio, and checkbox	363
10.2.2 The DOM interface for input elements	364
10.2.3 Controlling text fields and buttons	365
10.2.4 A page to change your password	370
10.3 Multiple checkboxes and radio boxes	374
10.3.1 Using multiple checkboxes	374
10.3.2 Controlling radio boxes	377
10.3.3 A page to obtain personal data	378
10.4 Select boxes and their applications	384
10.4.1 The DOM interface for select box	384
10.4.2 A page to offer discount holidays	385
10.4.3 Controlling text area and select boxes	387
10.4.4 A page to change options at run time	390
10.4.5 Adding and deleting an option	392
10.5 A page to match new friends	395
10.5.1 The display and data structure of the page	395
10.5.2 Generating the client data	398
10.5.3 Searching and matching the client data	399
11 Using the Document Object Model (DOM) II	403
11.1 The object structure of the DOM	403
11.1.1 The DOM structure	403
11.1.2 A general picture to access Web page elements	405
11.2 The collection features provided by the DOM	406
11.2.1 Collecting page elements by name	406
11.2.2 Using collections provided by the DOM	409
11.2.3 A page to catch random ghosts	412
11.2.4 Collecting page elements by tag name	417
11.3 The DOM Core	418
11.3.1 What is the DOM Core?	418
11.3.2 The node representation of page elements	419
11.4 Working with the DOM Core interfaces	421
11.4.1 The node interface	421
11.4.2 The document interface of the DOM Core	424
11.4.3 Inserting and deleting page elements at run time	425
11.4.4 Generating and controlling attributes with the element interface	428
11.4.5 Generating images at run time	429
11.5 Some DOM Core applications	432
11.5.1 A page to organize your photos	432
11.5.2 An interactive card game	438

12 Date and time manipulations	441
12.1 An introduction to date and time functions	441
12.1.1 Working with the date object	441
12.1.2 Setting date and time at creation level	442
12.1.3 Basic date and time functions	444
12.2 Static date and time on the Web	446
12.2.1 A page can say good morning	446
12.2.2 Matching the names of weekdays and months	448
12.2.3 Detecting leap years	449
12.2.4 Getting an input date with drop-down boxes	451
12.2.5 A page to find the weekday	455
12.3 Dynamic date and time on the Web	457
12.3.1 Implementation of clocks with different time formats	457
12.3.2 A digital clock with animated images	460
12.3.3 A running countdown to Christmas	463
12.3.4 Countdown with animated images	465
12.3.5 A question timer	466
12.4 Generating calendars	468
12.4.1 Adding a month calendar to a page	468
12.4.2 A general page for calendars	470
12.5 Getting date and time information from server	473
12.5.1 Why server time?	473
12.5.2 Server date and time using ASP	474
12.5.3 Dynamic time implementation with ASP	476
12.5.4 Countdown with ASP	477
12.5.5 Server date and time using PHP	479
12.5.6 A digital clock using PHP	481
13 Practical emailing	483
13.1 An introduction to email and mail agents	483
13.1.1 Set up your mail agents	483
13.1.2 Basic components of an email	485
13.2 Basic emailing with browsers	486
13.2.1 Activate email client with “Mailto”	486
13.2.2 A feedback page	488
13.2.3 Signing up to a mailing list	490
13.2.4 Sending email to someone anywhere	491
13.2.5 Sending multiple emails	493
13.3 Verifying email addresses using pattern matching	496
13.3.1 Pattern matching and emailing	496
13.3.2 Eliminating malformed addresses with quantifiers	496
13.3.3 Some rules for pattern matching	499
13.3.4 A constructive pattern to match an email address	500
13.4 Controlling email with ASP and PHP server script	502
13.4.1 The basic ASP framework to send email	502
13.4.2 A general form to send email with data validation	504
13.4.3 XHTML mailing format and attachment	507
13.4.4 Sending email with the SMTP server and check mail	511

13.4.5	The basic PHP framework to send email	513
13.4.6	An emailing form with PHP	514
13.4.7	MIME format and programming attachments	517
13.5	Emailing and Perl	522
13.5.1	My first perl script	522
13.5.2	Using Perl to get user name and email address	524
13.5.3	Mailing information to users with Perl	526
13.5.4	Checking emails with Perl	531
Part IV Server CGI techniques and databases		535
14 Using the Common Gateway Interface		537
14.1	Common Gateway Interface (CGI)	537
14.1.1	What is CGI?	537
14.1.2	The structure of CGI: how does it work?	538
14.2	CGI applications and preprocessors	539
14.2.1	Example of a CGI application	539
14.2.2	A CGI preprocessor – the “perl” program	541
14.2.3	The PHP preprocessor	543
14.3	Using CGI with forms	545
14.3.1	A revision of XHTML form and related elements	545
14.3.2	Using interface elements within forms	545
14.3.3	A page with multiple select boxes	548
14.3.4	A page to collect online orders	550
14.4	Passing data to CGI applications: name/value pairs	552
14.4.1	Passing form contents with the <code>get</code> method	552
14.4.2	Using the <code>post</code> method	558
14.4.3	A general script for the <code>get</code> and <code>post</code> methods	562
14.4.4	Passing parameters without forms	564
14.4.5	A page to log on to multiple sites	565
14.5	A simple e-commerce application for small businesses	568
14.5.1	A simple business model on the Internet	568
14.5.2	A page to receive and process online orders	569
15 CGI applications using Perl script		575
15.1	Using server environment and system functions	575
15.1.1	Environment variables	575
15.1.2	Calling system functions	576
15.2	Using server storage	579
15.2.1	Open a file for reading	579
15.2.2	A page to trace old records	581
15.2.3	Open a file for reading and writing	583
15.2.4	Building a Web page counter	584
15.2.5	Sharing files among multiple Web users	586
15.3	Basic CGI applications with Perl	586
15.3.1	Collect and store data online	586
15.3.2	Verifying user name and password	589
15.3.3	Implementation of a guest book	592

15.4	Practical CGI applications with Perl	596
15.4.1	Online examinations and marking	596
15.4.2	A page to reserve your seats online	603
15.4.3	A simple search engine	608
15.4.4	Accessing an ODBC database with Perl script	613
16	Using ASP and migrating to ASP.NET	619
16.1	An introduction to ASP and ASP.NET	619
16.1.1	What are ASP and ASP.NET?	619
16.1.2	My first ASP and ASP.NET Page	620
16.2	ASP objects and their applications on the Web	621
16.2.1	The structure of ASP	621
16.2.2	Creating ASP pages with different scripting languages	622
16.2.3	The internal objects of ASP	625
16.2.4	Creating ASP pages with application scope	627
16.2.5	Building user scope applications with the <code>Session</code> object	628
16.3	CGI applications with ASP	630
16.3.1	Using server variables	631
16.3.2	Passing form data to ASP pages with <code>QueryString</code>	633
16.3.3	Capture checkbox values with the <code>Form</code> collection	635
16.3.4	Using iteration methods on ASP collections	638
16.4	Controlling system storage and resources with ASP	641
16.4.1	Using <code>FileSystemObject</code>	641
16.4.2	A guest book using ASP objects	645
16.4.3	A page to locate and show properties of files	648
16.4.4	Obtaining drive information with the <code>Drive</code> object	651
16.4.5	A simple folder explorer using ASP	654
16.5	Migrating ASP to ASP.NET	658
16.5.1	A brief word on compatibility of ASP and ASP.NET	658
16.5.2	Migrating ASP to ASP.NET with examples	659
17	Programming databases and MySQL	664
17.1	An introduction to SQL databases	664
17.1.1	What is an SQL database?	664
17.1.2	The characteristics of SQL databases	665
17.2	Using MySQL	666
17.2.1	Installing and configuring MySQL	666
17.2.2	Setting up user accounts, passwords, and security	669
17.2.3	Creating tables for databases	671
17.3	Database programming with ODBC	672
17.3.1	The structure of ODBC	672
17.3.2	Registering MySQL databases on the Web with ODBC	673
17.3.3	A page to access ODBC databases	675
17.3.4	A page to access multiple database types	679
17.4	Database programming with Database Interface (DBI)	683
17.4.1	What is DBI?	683
17.4.2	The structure of DBI	683
17.4.3	Using DBI and <code>DBD::MySQL</code>	684
17.4.4	Using ODBC with module <code>DBD::ODBC</code>	688

17.5	Accessing databases with ADO and ASP	689
17.5.1	What is ADO?	689
17.5.2	Accessing databases with <code>Connection</code> and <code>Recordset</code> objects	690
17.5.3	Using ASP PerlScript to call ADO functions	693
18	Application of SQL and PHP to databases	696
18.1	Creating databases and tables with SQL	696
18.1.1	Designing databases with tables	696
18.1.2	Input/output data from database tables	700
18.1.3	Manipulating table data with SQL	703
18.2	Basic SQL query statements	706
18.2.1	Using the <code>SELECT</code> statement and logical operators	706
18.2.2	Sorting and multiple sorting of records	709
18.2.3	Building new fields with expressions	710
18.2.4	The <code>LIKE</code> operator and wildcards	711
18.2.5	Concatenation of fields	712
18.3	Built-in SQL functions and multiple tables	713
18.3.1	Using aggregate functions	713
18.3.2	Handling multiple tables	716
18.3.3	Joining tables and sub-queries	720
18.4	Designing database applications with PHP (I)	726
18.4.1	Using PHP on databases	726
18.4.2	An SQL test page using PHP	728
18.4.3	A page to explore all MySQL databases and tables	730
18.5	Designing database applications with PHP (II)	732
18.5.1	Deleting records from a table	732
18.5.2	A page to insert and update records	734
18.5.3	A page to walk through records with navigation buttons	738
Part V	Web security, e-commerce, and other topics	743
19	Security technologies on the Web	745
19.1	Basic data security	745
19.1.1	Cryptography: encryption and decryption	745
19.1.2	Digital keys and passwords	745
19.1.3	Public-key cryptography, digital signatures, and data verification	746
19.2	Data protection begins with passwords	748
19.2.1	A simple page to use an encrypted password	748
19.2.2	A Web page protected by a password	750
19.2.3	Using encrypted passwords in a file	752
19.3	Putting encrypted passwords in databases	755
19.3.1	Creating an encrypted password table in MySQL	755
19.3.2	A page for members to sign on	757
19.3.3	Set up new password accounts	759
19.3.4	A page to change your account's password	762
19.4	Message Digest (MD) and digital signatures	765
19.4.1	Building a utility from the MD standard programs	765
19.4.2	Using the MD utility for digital signatures	767
19.4.3	A page to protect downloads from viruses and alterations	769

19.5	Data security with public-key technology	771
19.5.1	Conventional and public-key cryptography	771
19.5.2	Hybrid cryptography	771
19.5.3	A brief discussion on the RSA public-key algorithm	772
19.6	A quick tour of GnuPG	773
19.6.1	Installation of GnuPG	773
19.6.2	Generating and deleting public/private-key pairs	774
19.6.3	Exporting and importing public keys	777
19.6.4	Encryption and decryption using GnuPG	779
20	Practical e-commerce and SSL security	781
20.1	An introduction to e-commerce	781
20.1.1	What is e-commerce and why?	781
20.1.2	Some common e-commerce models	782
20.2	A general login page for e-commerce	783
20.2.1	Designing the customer profile with credit card information	783
20.2.2	Register new member to user profile	785
20.2.3	A login page for e-commerce	789
20.3	Implementation of an online bargain hunting shop	792
20.3.1	Getting user information with cookies and a database	792
20.3.2	Designing an online catalog with a database	794
20.3.3	Building the shopping-cart page	795
20.3.4	A checkout facility	800
20.4	Secure Sockets Layer (SSL) and OpenSSL	804
20.4.1	What is SSL and how does it work?	804
20.4.2	Installation of OpenSSL	806
20.4.3	Generating digital keys and certificates	808
20.4.4	Signing certificates as a CA with OpenSSL	813
20.4.5	Importing certificates into browsers	815
20.5	Building a secure Web site with HTTPS	818
20.5.1	Basic requirements to build a secure Web site	819
20.5.2	Integrating Apache and OpenSSL using Mod_SSL	820
20.5.3	Configuring Apache to use SSL	822
20.5.4	Configuring Apache for secure and insecure connections	827
20.5.5	Some examples to use the secure site	828
21	Mobile Internet and WML	834
21.1	An introduction to Mobile Internet	834
21.1.1	What are Mobile Internet and WAP?	834
21.1.2	How does the Mobile Internet work?	835
21.1.3	My very first Mobile Internet pages	836
21.2	Mobile Internet pages with WML I	837
21.2.1	Using the Mobile Internet Toolkit	837
21.2.2	Setting up a Web server to deliver WML pages	840
21.2.3	The basic elements of WML	843
21.2.4	The text formatting and table elements in WML	844
21.2.5	Displaying images on the Mobile Internet	846

21.3	Mobile Internet pages with WML II	847
21.3.1	Controlling WML cards	847
21.3.2	Creating animated pictures (WBMP) on WML pages	851
21.3.3	Obtaining user input with text boxes	852
21.3.4	Single and multiple selections	854
21.3.5	WML v2.x and XHTML-Basic	856
21.4	Using WMLScript with WML pages	858
21.4.1	What is WMLScript and how does it work?	858
21.4.2	The standard WMLScript libraries and functions	860
21.4.3	My first WMLScript on m-business	863
21.4.4	Using WMLScript for m-business	864
21.5	WML applications with CGI and databases	866
21.5.1	Using Perl script to generate WML pages	866
21.5.2	Building a WAP page counter using Perl	868
21.5.3	WAP and/or Web browser detection with PHP	869
21.5.4	Emailing with your mobile phone: mobile email	872
21.5.5	M-business with a database	875
